

About us

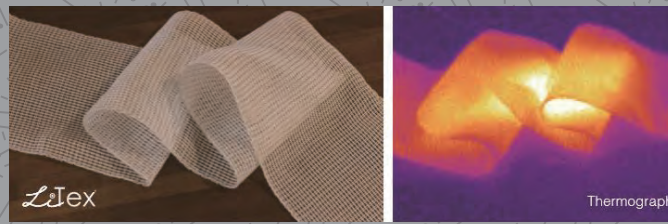

LiTex is a spinoff company founded in 1999 from a traditional narrow fabrics manufacturing business that was founded in 1960 called Hen Hao Trading. Through special projects and contracts that we took on, we ventured into manufacturing for heavy industries that needed woven metal products. The skills and knowledge learned through these special projects helped us innovate new products and expand our product line.

Being able to incorporate metal elements into fabrics was one of these skills, and it allowed us to develop innovative products such as the Wired Conductive Tape and the Conductive Metal Yarn (CMY). Our objective is to create new innovative products, and take a step into functional fabrics to make ourselves stand out in an ever-evolving industry.

Factory in Zhanghua, Taiwan

Heating Fabric

After many years of trial and error, we can incorporate conductive metal elements into fabric products to push the boundaries of functional fabrics. Our on-going projects include applications for seat cushions, mattresses, wearable items, and medical devices. We are optimistic about the future of our company as the market is maturing for such technology.
